

Dear Hiring Manager,

As a software engineer specializing in backend development, cloud infrastructure, and automation, I bring expertise in designing scalable microservices, optimizing deployment pipelines, and enhancing system performance. My experience with Python, Django, FastAPI, Google Cloud, and CI/CD automation allows me to contribute effectively to any technology-driven organization.

At Gigalogy, I played a key role in maintaining and enhancing the company's legacy product, gaining extensive experience working with large-scale legacy codebases. I worked on backend development using FastAPI, improving performance, implementing new features, and optimizing existing services. Additionally, I contributed to streamlining deployment processes in both Google Cloud and AWS, ensuring efficient and reliable infrastructure management. I also built robust CI/CD pipelines to automate the release process of backend microservices on Cloud Run and deployed Llama2 models using Google Compute Engine (GCE) with Infrastructure as Code (IaC) through Deployment Manager. My work involved automating ML-based services with bash scripts, integrating AWS tools like S3 and ElasticSearch, and ensuring seamless deployment through GitHub Actions.

At UDPlatforms, I developed and deployed serverless microservices using Google Cloud Functions and Cloud Run. I also built a CI/CD pipeline to automate infrastructure deployment, API gateways, and Firestore trigger-based history functions. Additionally, I mentored junior developers, ensuring adherence to software engineering best practices, including SOLID principles and TDD.

I look forward to the opportunity to bring my skills and experience to a forward-thinking organization.

Sincerely,

Omar Hasan
